

N O R T H W E S T FOSSIL FEST

August 12, 2006 ~ 10am to 4pm

Life in the Cretaceous Seas

A mosasaur finding it's first meal of the day, while a plesiosaur cautiously swims overhead. When dinosaurs roamed the lands, fierce marine reptiles, like the mosasuar, ruled the oceans. This scene may have played out in the seas that once covered the Pacific NW over 65 million years ago.

Inspire, Inquire, Interact

- Attend one of the several presentations and learn about the Pacific NW's geology and paleontology.
- Kids, have you ever wanted to find your own fossil? Stop by the "Screen for Shark Teeth" demonstration and find a fossilized shark tooth. You can also give the "Geologic Time Machine" a spin or learn how to "Grow Your Own Living Fossil".
- Have you found a fossil and would like to know what it is? Bring it in and we'll try and help you identify it.
- View fossils on display from the Pacific NW
- Visit the Fossil Preparation Demonstration to see how professionals clean and prepare fossils.
- Tour the world famous Rice collection of minerals.
